## Work Experience

### **Persistent Systems Public Ltd** as Senior Software Engineer

Oct 2017 to Till Date

Senior Software Engineer, Persistent Systems Public Ltd.: July 2019 - Present

Software Engineer, Persistent Systems Public Ltd: Oct 2017- July 2019

Project Description :

The Project is designed for a leading solar panel and battery storage company based out of United States of America. So we basically designed for them an application which is destined to regulate the flow of installation of solar panel across different locations in United States. It is developed for internal users (Sales Reps) and their hierarchies in an organization.

Responsibilities:

Responsible for requirement gathering from the client.

Deciding on the approach for designing and impact analysis.

Implementing the logics through integrations, trigger, batches .

Responsible for deployments across several environments through a different tool called Copado.

Exposed to work in sprints and take a lead for assigned user stories in a stand alone manner.

Exposed to working with On shore team directly.

Project Description :

The Two Wheeler Loan is an application which is designed to provide loan to customers. The end to end flow of loan application from initiation to disbursal is captured through the system.

It is developed for internal users of an organization.

Responsibilities:

Being single handedly responsible for requirement gathering from the client over DSM and mails which got me a direct exposure to client.

Analysis and design on requirement.

Implementation of custom lightning components and handling navigation between them through Lightning events and Lightning Aura methods.
