Work Experience

Infosys Limited as Senior System Engineer

Feb 2018 to Till Date

Toolbox Workflow

Company : Infosys Limited

Duration : July '18 to till date

Team size : 7+

Technology : Angular 6+, Typescript, JavaScript, HTML5, CSS/CSS3, Bootstrap, Spring Description: Toolbox Workflow is Web based Application for major Aerospace Company which is used to automate the process of publishing different types of Toolbox manuals to their customers. A dedicated web page is available for the customers to create and customize their own Airplane Manuals. Based on the permissions, the manuals are Loaded, Reviewed, Approved or Rejected, and Published. After these documents are published, they are available in the Library for viewing or downloading.

Responsibilities:

- * Developed the whole front end part of managing the workflow and the manuals.
- * Developed code to allow customers to perform different actions based on permission.
- * Showing toast notifications based on the actions taken by the customer.
- * Added features to let customers perform actions based on sorting and filtering the documents.
- * Written automated test scenarios to show different actions taken by customers with different permissions.
- * For each and every assigned task written jasmine test cases and jUnits.
- * Ensured Continuous Integration and Continuous Development (CICD) pipeline using Git.
- * Verified the code written by running build and release pipeline in Microsoft Azure.
- * Performed coding, peer review of the newly developed components.
- * Participated in Design discussions, Planning meetings, Retrospective meetings and Demos.

- * Resolved customer issues as when reported.
- * Handled code reviews.
