## Summary

- \* Enterprising IT professional, offering over 09 years of rich and extensive experience
- \* Experienced in working on:
  - o Tomcat
  - o Apache and WebLogic
  - o Middleware/WebSphere
- \* Expertise in providing technical support and maintenance including effectively supporting all internet, intranet and extranet applications and web sites as well as providing day-to-days support for all Tomcat / WebSphere and Middleware applications and components, ensuring timely resolution of problems
- \* Skilled in installation, configuration, update, and troubleshooting the services as well assisting WebSphere products in multiple versions including federating nodes, patching and upgrading software, environment configuration
- \* Excellence in designing an Architectural Diagram for various applications before migrating into Amazon cloud for flexible, cost-effective, reliable, scalable, high-performance and secured

## Work Experience

### **Touch2Success** as Technical Specialist Nov 2019 to Sep 2020

#### Key Result Areas:

- \* Monitored and logged tools like check mk for monitoring network services and host resources
- \* Designed, build and deployed a multitude of applications utilizing a number of components of the AWS (Amazon Web Services) including EC2, S3, Auto Scaling group, Elastic load Balancing (classic/application), RDS, VPC, Route53, Cloud Watch, Snapshots and IAM, focusing on high availability and fault tolerance
- \* Incorporated Jenkins with AVS to automate Services; managing chef cookbooks & recipes to manage systems configuration
- \* Generated and constituted Jenkins jobs, build and delivery pipelines; coordinated experience with various teams like Dev, QA and Production Operations
- \* Collaborated with several teams to transition workflows to Continuous Integration and Delivery model and implemented best practices for utilizing AWS
- \* Monitored and logged tools like opsmart for monitoring network services and host resources
- \* Designed, built and deployed a multitude of applications utilizing a number of components of the AWS (Amazon web services), including EC2, S3, Auto Scaling group, Elastic Load Balancing (Classic/Application), RDS, VPC, Route53, Cloud Watch, snapshots and IAM, focusing on high - availability and fault tolerance

### **CSS Corp** as Technical Specialist Aug 2014 to Nov 2019

Technologies Used: Amazon Web Services, IAM, S3, EBS, AWS, SDK, Cloud Watch, Cloud Formation, Chef, Java, Agile, Apache Tomcat 7.0, Python

#### Key Result Areas:

- \* Planned, designed and road mapped, POC implementation for AWS Cloud technologies as well as monitored role in application migrations to the cloud-lift and shift to AWS infrastructure
- \* Collaborated with development teams to incorporate projects into the production AWS environment and confirmed

ongoing support; designed and approved the AWS architecture diagrams and release models

- \* Automated the front-ends platform into highly scalable, consistent, repeatable infrastructure using high degree of automation using Chef, Terraform, Ansible, Jenkins, and cloud formation
- \* Implemented and maintained monitoring and alerting of production and corporate servers/storage using AWS Cloud watch and Splunk; utilizing json templates for cloud formation and rubyscripts for chef automation during production deployment
- \* Added project users to the AWS account with multifactor authentication enabled and least privilege permissions; deployed and validated application automation via Jenkins pipelines with the help of groovy script
- \* Configured Elastic Load Balancers with EC2 Auto scaling groups as well as conducted RCA on outages on managed host and SaaS environments
- \* Built S3 buckets and managed policies for S3 buckets and used S3 bucket and glacier for storage and backup on AWS
- \* Ran crisis calls impacting customers and performed emergency change orders and deployments; administered stale application instances/web instances
- \* Co-ordinated and performed Disaster Recovery for customer facing critical applications issues on the AWS platforms involving Route 53 changes and DB promotions (PostgreSQL, Mongo DB) for applications involving databases

 **Wipro Technologys Pvt Ltd** as Senior System Engineer  
Jan 2011 to Aug 2014

Technologies Used: Linux, IBM Websphere Application server and MQ Server  
Key Result Areas:

- \* Maintained web logic servers, Apache servers in Dev/Stage/Stress and production/burst mode in intranet/internet environments; created data source connection
- \* Assisted on call schedule for production support/stress support
- \* Deployed application like formats of .war and .ear files in Dev/Stage and production mode in intranet/internet environments
- \* Troubleshot application servers via monitoring tool "Newrelic" and conducting Root cause analysis as well as troubleshot and provided on-call support for client for solving online portal issues/deployment
- \* Installed, configured and administered web logic server in various environments as well as deployed applications on multiple web logic server and maintained load balancing, high-availability and failover functionality
