## Summary

Bangaru Venkatesh has over 20 plus years of rich experience in building, managing and architecting enterprise software for both private clients and government bodies. He has independently handled multiple longterm projects/programs and has contributed both technically and functionally along with the program management roles.

He has also handled projects with budgets exceeding 6 million dollars and handling teams over 200+ with a proven track record in transforming applications and upgrading the same to Next Gen apps to enable customers and partners achieve their full potential in growing their business.

Some of the recent projects include transforming strategic reporting applications that are used by CXOs to the next Generation platform using a combination of tools like QLIKSENSE, Tableau, Power BI, SAC and including cognitive capabilities in them for NLP and predictive analytics.

## Work Experience

### **Deloitte** as Sr. Technical Delivery Manager & Solution Architect Oct 2014 to Aug 2020

Responsible for delivering Flagship Strategic reporting for Deloitte global finance teams and CXO teams on the projections on the revenue and opportunity pipeline and Member firm reporting which is the core for revenue generation. Has led and architected the multi-year roadmap for implementing solutions using cutting edge BI tools and building in cognitive and predictive intelligence in the application. Led the next Generation upgrade on a hybrid platform using a combination of QLIKSENSE, PowerBI, Tableau, SAC Hana tools and led the Azure cloud transformation which is one of the biggest infrastructure and data centre migrations for Deloitte Global. Architected the solutions in way for High Availability, Scalability and with disaster recovery in mind. Also responsible for leading Azure DevOps implementations at the firm level and has led the Agile, SAFe transformations for the organization and implemented them on my projects. In addition I led the Analytics Center of Practice & AI-ML Incubation Hubs for Deloitte Global which is responsible to set standards for Analytics implementation and delivering Alpha lab projects to get projects in future roadmaps in collaboration with business teams.

### **Deloitte Support Services India** as Associate Vice President Oct 2014 to Till Date

Has blended strengths with both technical and stake holder management to influence & act as a change agent transforming applications to latest platforms/technology including Azure cloud transformation, cognitive & deep analytics to achieve full potential. (budget range 8 million to 15 million dollars, team size ~200 plus cross geo.

Led the Azure Cloud migration and transformation effort for the biggest application involving 100 plus servers, with complex data mart topology involving ~ 50 data loads daily and 60 monthly loads to harmonize data across in the other integrations. ( IaaS, PaaS, SaaS) using ATADATA a cloud management platform to streamline the mapping, migration, and management of enterprise-class workloads in any combination of hybrid IT and cloud environments. ( Private Cloud )  
? Architected & delivered multiyear roadmap for transforming strategic reporting and responsible for technical delivery

of the product along with other senior leadership roles including overall engagement and stakeholder management.  
 ? Handled & lead various projects for the Microsoft Partner Network and OEMPartners Team @ Microsoft IT responsible for a lot of Transformation projects.

● **Microsoft corp. MSIT India, MSIT Redmond** as Sr. Technical Program Manager  
 Feb 2007 to Oct 2014

My first assignment was to deliver a "Big Bet" project for the Learning domain for partners. This was delivered on time within budget with excellent feedback from all stakeholders increasing the CPE by 20 % which gave the India team end to end ownership of the learning domain. This project set the path for next assignments that landed on my plate - to transform the "Partner Dashboard" application and the "Partner Portal" to the next generation system to scale up to the business needs. Some key recent assignments were to migrate Partner Portal on SharePoint 2013 which not only increased the customer partner experience, but also reduced business cost by 30 % by not having to have dependency on engineering cycles for content changes and reducing the publishing pain with older processes. My other assignments were in the Key area in the Sales and Marketing division - which is on the Lead to Order process which is a key project to enable revenue for Microsoft IT. This is on Dynamics CRM technology and a combination of other technologies like sliverlight and SQL server to complement the diverse business needs. Some of the recent programs were again on SharePoint platform (MASS, Partner PORTAL, Membership. Next & OEM Portals, building complex BI and Operations reports for the OEM partners and sales force). Innovations:

2010 - Created a Windows Mobile application to show partners KPIs showcased at the World partner conference.

2012 - Conceptualized & developed a POC using Kinect SDKs that helps bridge communication challenges between a speech impaired person by converting sign language to text and integrating it with a chat program and speech APIs. Kinect Bridge took Kinect beyond a gaming device which won various awards called out below.

o Kinect 'Senor It' Challenge by the Kinect Team (Redmond) - Originality & Innovation o MSIT Garage Event (Hyderabad)

-Thought Leadership Award o MSIT Garage Event (Redmond) - "Mad Scientist Award

o Demo at milestone event conducted by Microsoft Research Advanced Technology labs Israel

o Will be presented at the Techready16 2013 at Redmond as a breakout session.

2012 - Showcased a POC that would enable localization on SharePoint 2010 which won the project for engineering to handle localization for the next gen partner portal instead of going forward with buying a vendor solution

● **Government of Oman - IT India** as Senior Software Engineer & Architect  
 Oct 2002 to Jan 2007

Lead the IT development team, designing and executing upon a 5 year road map which was created by me to replace the applications that were running on legacy mainframe systems / licensed applications like File-net with in house built applications on Microsoft technologies. Key Skills:

Was accountable for end to end software development as a consultant playing multiple roles ranging the entire SDLC. Instrumental in building a full fledged development team starting with 2 developers to a 45 member team.

Trusted advisor not only for the Government of Oman IT department but also other organizations who wanted to adopt Microsoft technologies.
