Blueshift Information Systems as Senior Software Engineer

Jul 2008 to Nov 2013

Project Details

Project Description

OTS is one of our product and most of the top companies in India use this product for online test purposes. This is product where the candidates can take the test by entering a unique login id and password and this product also supports a test under one particular Supervisor on each centres. Using this product, we need to create a separate dedicated Database and instance for every client. This product has three modules - Question bank module, admin module and test taker module.

Tables are created for every client that is created using this product. We use SQL 2005 database and the front end is created using C#.NET.

Responsibilities

- * Guide the Client and educate him about the features of the product through a Demo.
- * Deploy the Application in a Pre Prod server and then in the Production server.
- * Handling the test in both IBT (Internet Based Test) and CBT (Client Based Test) modes.
- * Monitoring the Test through a common panel for candidates up to 2000 (concurrent users).
- * Resolve any data issues or any issues related to SQL 2008 Database
- * Immediate response in client queries

Project Description

OAMS is our prime product and most of the top B-Schools in India use this product for their registration process. This is product where the candidates can register for the university make their payments online. The candidates test the admit card generated and after the test the candidate can check their scores. This is highly configurable product the product is changed and customized based of every client requirement. Using this product, we need to create a separate instance for every client. Tables are created for every client that is created using this product. The tables are differentiated using the client short name which has to be given at the time of creation. We use SQL 2008 database and the front end is created using VB.NET. The Client configuration and client specific customization is done using XML.

Responsibilities

- * Collecting the requirements from the client by providing a checklist
- * Customize the product as per client request such that it looks Specific only to that client
- * Deploy the Application in a Pre Prod server and then in the Production server
- * Maintaining the student's confidential data such as scores
- * Generate reports thro SQL
- * Resolve any issues related to SQL 2008 Database
- * Deploying client specific changes without affecting other clients in SQL DB
