Feb'12 - Oct'14

Project: Asset Management System

Client: GE Healthcare

Environment: Java 1.7, Struts 1, oracle 10g, Eclipse Rally & Maven tool, Agile Methodologies.

Role: Team Lead, Developer

Brief description of the project:

iCenter is web based application of Enterprise Asset management, iCenter is used to manage different kind of asset. Broadly there are two different kind of asset, BIO med and DI, icenter is for managing DI asset. There could be two different kind of user of icenter application, 1st is Internal that is GE employee and other is External that is individual Hospital or facility who has taken equipment or device from GE or has taken some kind of service like extended contract from GE. By using icenter application, managing asset, asset can be of GE or non GE. If some hospital has taken new equipment from GE then it has some contract associated with equipment. For non GE asset then hospital can go any new contract with GE.

iCenter application helps to management in order to take business decision. Management can take different kind of report like average asset utilization period, average asset up time or asset down time, they can also generate report of how many service request within specified period of time, they can also see the report how many contract is going to end in coming month so they can again approach to with new business.

Responsible for:

Code review and deployment.
Involved in creation of technical design documents.
Team management and mentoring.
Requirement gathering and task allocation.
Customer interaction and status update and planning.

● **Infosys Limited** as Developer

Mar 2010 to Dec 2011

Mar'10 - Mar'11

Project: Sync Server Engine

Client: Apple

Environment: Mac OS/Windows XP/9x, Java 1.5, berkely DB

Role: Developer

Brief description of the project:

This Project is all about enhancement of a sync server application. Issues of the customers are recorded as RADAR. Replicating the radar issue, analyzing the user data, by manual and testing tool., then providing the solution to the issue by enhancing the sync server application. Application is developed using java technology with BD database.

Responsible for:

- * Assigning, monitoring Task with subordinates.
