Work Experience

Tata Consultancy Services as Assistant Consultant Jul 2011 to Till Date

Client: Ameriprise Financial Inc
Client Role: Technical Team Lead
Project: Brokerage Products Development & Operations Minneapolis, MN, USA/Bangalore India
April 2020 - To Present
Arrived India in August 2020

Ameriprise trade in multiple products and due to that there are large front end and back end applications built for these products. Some of the know products are Active Portfolio, UMA/SMA, Select Separate, SPS etc. On a nightly basis large transaction of data arrive from financial partner Refinitiv which processed under Mainframe and Informatica and gets loaded into Oracle, SQL DB. Plethora of business reports are access through PowerBI or tableau for business activities. Multiple Frontend UIs fetch the data through APIs or CICS transactions. These large processing require SME knowledge and robust operational support for 24x7.

Responsibilities:

Leading a team of cross platform technologies which include Informatica ETL, Mainframe, Distributed Digital technologies and Cloud Services.
Work with team on designing, developing and supporting the application hence include full SDLC cycle and Operations work as well for existing applications.
Attend JAD session with business to derive the business logics and convert those logics in technical specification documents.
Perform Data engineering activities for data profiling and data cleansing.
Analyse, categorize and prioritize Development/support tickets based on severity. Be flexible to reprioritize based on business needs and communicate the reasons to the stakeholders.

Important

- Using Free CV Search you have access to featured candidate profiles of Naukri. You can browse through the profiles and email the candidates of your choice directly using the email option provided. Perform activities related to Agile/Scrum and managing User Stories and Backlogs through Jira.
 Prepare project schedule & delegation of development work and send it to respective stakeholders.
 Prepare various KPIs and Metrics used in reporting of Development and Support projects.
 Provide Architectural direction of complex technical issues in various technology.
 Perform Hardware and Software administration, software updates, software patches install and license audits.
 Environment & Activities: ITIL Methodologies, JIRA, Team Management, Informatica Technologies, Mainframe Technologies, Digital Distributed Technologies and Cloud.

Client: Ameriprise Financial Inc
 Client Role: Technical Product Manager
 Project: Advisors On-boarding Web Application Minneapolis, MN, USA
 Jan 2019 - March 2020

Ameriprise Financial Advisor works on Premium products which requires advisor to have special training and certain qualifications. For the purpose of validating the advisor before they can start selling such products and in turn do trading an On-boarding application was build where advisor will fill out a digital form which will have 50% of advisor's details auto populate by various means of APIs and these forms on submission will trigger a workflow that will be tracked at Advisor's manager, Registered principal and Field Vice President. Once all the levels approve the application with supporting documents business will review the form and provide approval post that multiple logical processing will determine the advisor's access level for trading premium products.

Award Received Award for excellence from TCS for exceptional effort in executing the product development.

Responsibilities:
 Responsible for end to end Product management - Design, Conceptualization, prioritization, testing, and client engagement for an Advisor facing application critical for client.
 Worked closely with UX/UI Designers for High and low fidelity prototypes, Java based Back End Services team for APIs, Platform Engineering Teams, DBAs, Client Leaderships and other cross development teams to execute product releases and to drive continuous innovation.
 Worked on a constructive solution with Cross platform teams to avoid usage of adobe reader for blob parsing in turn saving \$50K from Software Development Budget.
 Improved Agile scrum model by effectively leading scrum of scrums with multiple SD, QA and BA Teams to develop the product effectively.
