Accenture Services Pvt Ltd as Senior Software Engineer -Dot Net

Dec 2013 to Till Date

PROJECTS UNDERTAKEN

Projects I have been part of:

Project 1: Document Storage Application:

Role: .NET WEB API Developer

Description:

Document Storage Application acts as a storage application for any application especially ServiceNow Application that doesnot have any other database mechanism to store.

The communication to and from the applications to document storage happens by API calls.

Responsibilities:

Web API created and used to call ServiceNow application and store documents to our Database.

Implemented Repository Pattern.

Created WebAPI's to consume the data, also API's to send the data to Service Now application.

Project 2: Document Flow Manager Application:

Role : C# WEB Developer

Description:

Application which we built to handle the invoice processing flow for PTP and CTC teams, having more than 50 clients.

Responsibilities:

Build web pages .

Handle changes according to client requirement.

WebForms application to handle both images and data side by side and provide ERP like feel to compare and approve data.

Constant upgrading of solution to handle new .NET features.

Project 3: Document Integrator:

Role: .NET Windows Forms Developer

Description:

Windows Forms Application used to ingest invoices from different multiple locations, multiple client. Handling conversion and Validation of Password Protected file, Virus check etc and then import these documents to respective application databases.

Responsibilities:

Build new WindowsForms pages according to requirement.

Implement new and updated features to consume the files sent via mail, fax, printer , scanning solutions and store it in DB.

Change management according to client requirement.

DWP deployment:

Handling deployment of the code, handle SQL server operations including creation of required procedures, views, functions and SSIS reports.

Project 4: PO MAPPING:

Role: React Front End developer

Description:

A document comparing tool, built to compare the same document from different ERP systems.

Responsibilities:

React JS was used to build the front end for this application.

API created to send data to DB.

API to consume and send the data from applications and database.

TECH UPGRADE:

ROLE: REACT front end developer

Description:

An easy portal for suppliers to take action on their company invoice.

Responsibilities:

Involved in upgrading of .NET application to React.

Building new modules to accommodate existing functionality.
