Summary

A focused professional offering 10 years of experience in Project Management, Technical Support, Agile Methodology, Application Support, Process Improvement, Application Development, Process Inspection, Client Servicing, Backend Operations, PostgreSQL, Spring Boot

Work Experience

Accenture as Team Leader-IT Sep 2010 to Dec 2020

Worked on designing and building multiple micro-services based on Java 8, Spring Boot, Apache Kafka, PostgreSQL and Kinvey.

Delivered a set of Micro-services that helped improve the locomotive inspection and maintenance process. The main aim of micro-services was to help integrate the data and systems. They were responsible for consuming and storing data in database as well as send the same to Kinvey that acted as a backend for a mobile application.

I also worked on micro-services that handled the financial components managing receivables, payables, payments, disputes and miscellaneous transactions.

May 2017-Jan 2020

Helped build a custom mobile application to sell products and plans with higher efficiency in stores based on Java 8, Spring Boot, Spring Webflow, MongoDB and Mulesoft.

I was onshore for the duration of May 2017 - Aug 2019 and helped manage 2 scrum teams delivering user stories across multiple sprints and managing client expectations. I helped the product owners take design decisions for smoother development.

There were multiple modules within the application that supported different aspects of products and plans. The Spring Boot application which I helped build acted as the integrating layer between the frontend and backend. It was responsible for fetching required data from backend through Mulesoft and then converting them to the JSON format expected by the front-end.

Helped implement the Consent and Preference Management platform using Java web services based on Java 6, IBM ODM Rules and Event Manager, and IBM DataPower. This was a time-critical project with legal implications, and I was involved from start to finish ensuring smooth expansion in 8000+ stores. The project mainly aimed to gather customer's consent and preferences and with it improve the customer experience by bringing in the flexibility of obtaining prescription status notifications over various channels like email, SMS, IVR calls. With the implementation of the new notification system using event-based rules, even if a customer calls back, there will be a guarantee of delivering near real time information.

Worked one year at offshore and another year at onshore on the Pharmacy Rollout Enablement project based on Java 6, IBM ILog JRules, Web Services and Oracle SQL.

Again, I was part of the project from start to finish. I supported 5 different releases of the project. The first year was spent in developing 3 web services based on Spring. I was assigned the most complex module, a batch job responsible for balancing the outstanding work among the number of users who are logged in. The next year was all about performance improvements and scaling the application all the way from 350 stores to 1700+ stores.

Worked as a developer on an integration project based on Java web services, IBM Websphere Message Broker, JMS,

IBM ILog JRules and Oracle SQL.

The pharmacy chain had multiple source systems, each with their own system of saving customer information - personal information, medical information like allergies, medical history, immunizations, etc. The goal of the project was to build one single platform that could host all the information and provide it in the source specific format upon request. I was responsible for developing multiple web services.

Worked as a developer on a Customer Relationship Management application based on Java 6 and Oracle PL/SQL. I helped build Java web services as well as batch jobs. These were responsible to either read/update customer specific information from/to the database.

 **Accenture** as Team Leader
Aug 2010 to Till Date
