## Work Experience

### **Evive Software Analytics Private Limited** as Software Developer Engineer I

Sep 2018 to Nov 2020

Projects Handled

Command Center | Client: HCSC

Duration July 2019 - Till Date

Project Type Development and Production support Work Environment Java 8, Postgres, AWS dynamo DB.

Synopsis Command Center is a web portal where client can login, fill up the details, select vendor programs, schedule notifications and choose tags and their rules. Based on these selections, content is displayed on another application - MyEvive.

Key Responsibilities

Involved in technical discussions with team to brainstorm the client requirements. Followed Agile software methodology for project development. Worked on Requirement Analysis, Design, Development, Unit Testing and Load Testing of the Application.

Developed REST APIs in Java 8 to retrieve/delete/insert the information from DB. Using JIRA tracking tool for assigning and defect management.

Responsible for on time completion of development and testing activity. Peer code reviews and ensuring to follow the quality audits.

Involved in solution design, coding and build of customizations.

Responsible for faster issue resolutions in order to gain customer delight

Communication Manager

Duration March 2019 - June 2019

Project Type Implementation  
Work Environment Cassandra database, Java 8  
Synopsis Communication Manager is an Application that acts as a communication medium between Evive and the employees of clients.  
Key Responsibilities  
Handling of Nudges- Email nudges, SMS nudges and Push notifications. ? Peer code reviews and ensuring to follow the quality audits.  
Estimated the efforts required for resolution of the issues raised by the clients.  
Responsible for on time completion of development and testing activity.  
Admin JSON Loader  
Duration December 2018 - February 2019  
Project Type Development and Production support Work Environment Java 8, Postgres, AWS dynamo DB.  
Synopsis The main aim of Admin is to ease the work of internal teams in Evive and to bring every redundant task being done by the teams to a single Board.  
Key Responsibilities  
Admin JSON Loaders is the main striking feature which I worked upon.  
Hence now QA's or any other teams have a perfect UI build configured with the database to load data with ease.  
Eliminated the usage of manual queries to insert or update data.  
ETL (Extract Transform Load)  
Duration September 2018 - November 2018  
Project Type Implementation  
Work Environment Cassandra, Java 8  
Synopsis ETL is a process in which raw data given by data vendors is extracted, transformed according to the database schema, validated and loaded if the record is correct.  
Key Responsibilities  
Configured Medical Claims ETL using SPEL expressions. Peer code reviews and ensuring to follow the quality audits.  
Involved in solution design, development and build of customizations
