Work Experience

VISA as Technical Project Lead Apr 2013 to Jun 2020

Customer Online Repository (CORE)
Maintain Customer Online Repository application that stores authorization parameters, used by Visa-Net Integrated Processing to authorize payment transactions. The application is part of Client Profile systems for Clearing and Settlement (CAS) in Network Processing

Responsibilities:

Leading the project team of 8 resources having diverse technology & domain experience, based in Singapore, India & US, to enhance & maintain Web & Mainframe (batch) applications and thereby ensuring that VISA-Net processes maximum real-time payments globally

Accountable for end to end software development and delivery/implementation of the project by participating in estimation and scoping, defining and developing functional/technical specifications to meet systems requirements, analyzing, contributing and reviewing high level design to detailed low level design document,

Conducting walkthrough and require elicitation meetings with business analysts, key stakeholders and technical team for finalizing scope and receive requirement sign-off.

Collaborating with technical team members to perform detailed requirement review, and conducting design discussions with enterprise and solution architects

Develop project plan and status reports; for scheduling and identifying & assessing project risks, build and track mitigation/contingency plans

Extensively use my deep understanding and experience in delivering payments products, coupled with hands-on technical skill, to lead the project team and deliver the work within tight timeline and budget.

Review test cases and scenarios for unit as well as System testing. Coordinate with QA team in setting up the testing environment and test data for Components/Application integration testing.

Train team members in various aspects of the applications/projects and guide them in technology trainings necessary for their day-to-day work and career progression
