Project Role

Lead Architect, Technical Project Manager

Managed Team Size 16

Project

McDonald's Kiosk Feature Development

Develop additional features for McDonald's Kiosk application based on market requirements. The Kiosk applications itself based on microservices architecture which requires modification of those services and creation of new microservices to fulfil new requirement. The backend for application is implemented in C#.NET with front end side being developed with Angular. The applications also use a centralized deployment mechanism using team city automated build system. The project also requires creating an automated unit testing using Nunit and Moq framework. The feature development is completed using Agile project methodologies and automated CI-CD pipeline for creating builds and deployment.

October 2014 - October 2018

Capgemini USA, Chicago

Client

McDonald's Corporation
