Project Details

DTAG (ENUMLoad Balancing VNF on HA Mode) Project Title

Description ENUMLB application will receive an ENUM request from TDG network elements over UDP. The keepalived daemon is used to manage MP and service. The LB service will be running in both the active and standby mode, but active role will be managed by keepalived. The keepalived will monitor the mandatory service. In case the active ENUM-LB stops sending health packets, keepalived reassigns the Virtual IP address to the passive ENUM-LB. Period May 2019 Till date

Team size 2 Location Gurugram, India

Role Implementation and support of the product as a Team lead

Responsibilities Understanding user requirements and system specifications, Configuration by init Cloud and SOL002
