Well-suited to collaborate with cross-functional teams and changing technologies.

Work Experience

Tech Mahindra as Software Engineer (Application Developer) Jul 2018 to Till Date

Tech Mahindra as Software Engineer (Application Developer) Jul 2018 to Jul 2018

Role: Software Engineer (Application Developer)

Overview: This project revolves around managing the portal used by technicians and care agents of our telecom client where our application plays a major role. It is a Java EE based application capable of interacting with various wired and wireless equipment deployed at consumer end. It helps technicians to check the status of equipment using BPMN workflows and provide resolution to the customer and also triggers order for new equipment when required.

- ? Designing and developing workflows using Nokia Workflow Builder
- ? Feature addition and defect management in the application
- ? Working as a part of scrum team

Role: Software Engineer (Application Developer)

Overview: This is another project which involves an application which consumes millions of events from multiple sources per day and processes them in asynchronous way. This is based on MEAN stack which consists of legacy code written in AngularJS with event processor Apache Kafka and Zookeeper. It uses MongoDB and Redis for data management.

- ? Replication, fixing and deployment of critical production issues
- ? Created Linux POC for migration to Microsoft Azure
- ? Troubleshooting REST API Calls using clients like Postman

Education

UG: B.Tech/B.E. (Computer Science and Engineering) from Amity University, Noida in 2017
