Work Experience

CustomerXps Software Pvt Ltd as Senior Software Developer May 2017 to Till Date

Product company providing financial crime risk management and customer experience management solutions to banking institutions

Real Time Decision Engine

Which predicts whether a banking transaction is fraudulent or not and provide the decision in real time whether it has to allow or decline. worked on all enhancements in this module.

Scenario Reset

In this once the pattern matches as a fraudulent for a transaction and a case is created in case management system then suppose the investigator investigated and closed case then the next pattern should not bring old intelligence.

Customer Risk Categorization

Which categorizes the customer?s risk level by running a pattern given by bank on all customers or selected new customers to get the risk level and score based on which they can take further action like passing loan or closing an account

Migration tool

Developed an independent tool using java and multi threading which runs as a job for migrating data from multiple tables to one table by applying merge logic using producer consumer approach. Syncer

Worked on enhancement of this module using java and

multithreading, after which overall performance of case management system was improved
