Work Experience

Cognizant as Programmer Analyst

Jun 2018 to Till Date

Was a development project in lightning that brought in a lot of changes in UI and visibility. Being my debut project in salesforce, it provided me with a lot of experience in exploring through various functionalities of salesforce.

I have also worked with external objects, custom DRMI components, controllers and salesforce configuration items like page layouts record types, list views, profile accessibility to record visibility, etc.

Learnt about different type of flows like process builder and workflow rules and understood the need to implement a flow under certain requirement.

Performed scheduled actions and implemented Invocable methods in Apex Classes through process builder. Configured data types for fields on external objects for external data sync.

Worked on certain ongoing custom lightning components under the supervision, and learnt the client-side and server-side role of a lightning component.

Created custom lightning quick actions and called a lightning app from the visualforce page on list view.

The development was both in lightning and visualforce, and had implementation on community sites.

Had exposure to lightning data services and developed a simple user-friendly lightning UI out of the complex and bulky requirement.

Worked on resolving browser and media compatibility issues on sites that were implementing visualforce pages.

Providing scheduled deployment using Change Set, Workbench, Eclipse and ANT.

Interact with Management to understand the requirements and clarifying the doubts.

Worked for the user story requirements and prepared the software functional activities. Involved in creation of Visualforce Page.

Coordinated with co team members to develop high level business and technical Documents.
