**Project Description:** 

Bizruntime Althing application is a web application as well

as desktop and mobile application. It is a Field data capture application for oil and Gas Company. FIELD DATA CAPTURE(FDC) is the gathering and analysis of manually entered or electronically uploaded data form field equipment.

Oil and Gas facilities have hundreds of metering points. This application has many modules like Collaboration,

BI(Business Intelligence) Operational forms etc. for user management, Inspections, Data analysis etc..

The application is used to capture standard volumetric readings and measurements like oil

,gas and water volumes, well tests, run tickets, downtime information, and other and these data can be used for multiple purposes as per the requirements.

Environnent: C#,AngularJS, HTML5, Jquery 3.3.0, CSS 4.0 Database: MS SQL

Site URL: fms.saintfrancisministries.org/

Project Description:

It will facilitate fleet management & operations at multiple branch levels and will provide a centralized Information system for Management. It will optimize the trip bookings & help in expense monitoring. It will also facilitate to provide a bird's eye view of all the vehicles in transit with the real time location detail. Helps with the tracking of each trip and also gives facility for adding back dated trips.

1/22/2021

It Consists of three module's namely admin, staff and drivers. Admin has all the master access and is responsible for assigning driver according to drivers free schedule and work load. Admin can also cancel a trip in case driver is not available or any other reason. Staff main role is to create trip's of client. Staff can add multiple clients in single trip according to their pickup, destination and traveling timings. Driver has unique role for storing location and time when they arrive at location, when they checkln and checkout the client.
