Projects

Project Title: Social media analytics
Client: BSE
Nature of Employment: Full Time   Duration: Oct 2017 - Till Date
Project Location: Pune   Onsite / Offsite: Onsite
Role: Programmer   Team Size: 3
Skill Used: Angularjs, Spring Mvc, Spring Boot, PLSQL, Bootstrap
Role Description: Full stack developer. Built this web application using postgres/PLSQL database, spring mvc and boot for backend along with angularjs and bootstrap in front end.
Project Details: It uses angularJs as front-end development along with html, css, bootstrap, javascript. And spring MVC for back-end integration with java, postgres sql to store database information. This project analyses information which are in the form of website articles or facebook and twitter posts received by different users, affecting stock market BSE. The data is analysed by using different approaches. It is then presented to client to let him know, what affects his progressive business. This is a responsive website built for computers and laptops.

Project Title: client service application system
Client: CSAS/ Great west global
Nature of Employment: Full Time   Duration: Jun 2016 - Jun 2017

Project Location: Banglore   Onsite / Offsite: **Offsite**
Role: Programmer   Team Size: 6
Skill Used: java, struts, Bootstrap
Role Description: Built a loan request screen using purely bootstrap along with struts framework.
Project Details: An application used in financial industry to track and let user have option to apply for loan(primary or mortgage). Its primarily focused on user ease to handle every request. Information regarding term, instalments all will be available for user. User can directly apply for it. If he has user privileges.

Project Title: Wifi- Spectrum analyser
Client: College Final Year Project
Nature of Employment: Full Time   Duration: Apr 2014 - May 2015
Project Location: NIT Puducherry   Onsite / Offsite: **Onsite**
Role: Project Leader   Team Size: 2
Skill Used: java, dbms, MySQL, HTML, Javascript, CSS, NetBeans, netsh tool
Role Description: I have collected different signals with its strength based on 2G/3G or WIFI or 4G. Used different devices to moderate signals. Such as laptops, android mobiles, routers, modems. To get better depiction of properties, we used NetSh tool.
Project Details: It is a web application. Used to detect WiFi signals and its other properties. Based on strength and quality a graph will be resulted which is used to choose signal. Factors which affects a signal are listed out. And for different SSIDs different spectrum will be produced. Which helps user to have clarity on signal. And help user to choose one.
