Work Experience

Tech Mahindra Pvt.Ltd as Software Engineer
Nov 2014 to Till Date

1. Project Name: - Product Master File (PMF-BT)
Description: -
Product Master File (PMF) is a Component relevant to BT Retail, It is an Operational Support System which holds all the information and configuration detail for all of the products sold by BT to its customers. Product Master Files can also be termed as the data platform which deals with all the end stacks that are lined up to fulfill an order journey under various BT Retail product lines. PMF is responsible for defining product model. It also acts as central repository for entire product modeling data. The need of having product master data platform is to avoid defining the product model explicitly at various downstream systems. Further avoids redundancy at the end system and also it would bring standardization of product model across the system which in turn, help in simplifying the integration between end systems.
Technologies and Tools involved: -
SQL Developer, Quality Center 10.0, Amdocs Clarify CRM 6.0.1.31, Subversion (SVN), SharePoint,PIM2PIM Tool, Test tools, Macros tool and Develop Excel Macros.
Roles and Responsibilities: -
*   Requirement Analysis, datasheet Reviews, Test case preparation and Development to downstream components
*   Arrange design walkthrough to make team understand business logic and impact of change
*   Co-operate with End OSS teams and Test /QA teams to develop a development approach and strategy for a product and/or suite of products
*   Defects were analysis and fixed within timelines to support good progress in testing

* Providing required data immediately from Live on receiving requests
* Report regular status of testing and faults to the delivery team (Daily and weekly)
* Support to the team members in understanding automation tools which are newly developed

2. Project Name: -Content Management Service (BTW CMS- AEM and ASG Support)
Role: -Software Engineer
Description: -
CMS stands for Content Management Service and working as1st Line Support. Content management is about making sure that content is relevant, up-to-date, accurate, easily accessible, well organized well organized etc, so that quality information is delivered to the user.

The Contents on BT wholesale web page is managed by CMS as requested quested by the respective users.CMS team amends the all BT Wholesale pages and we create new pages, Edit page, Replace file, Briefings and also create/provide the user access to team site application.

Technologies and Tools involved: -
HTML5, CSS3, JavaScript, AEM (Adobe Experience Manger), FEC SharePoint, Briefing SharePoint, CC Professional, Team site Application, Bridge Case
Roles and Responsibilities: -
* Developed UI for BT Wholesale site
* Creating web briefings for various product lines
* User access for Team Site application can be created
* Creation of different forms on BT wholesale Live web page
* Uploading links, files, images, etc and Amendment of all BT wholesale pages
* Raising Change request, implement change after implement closed the change
* Give approval for change release if that change not affects the BT wholesale application.
* Ensuring that content is reviewed and approved by the appropriate person(s) prior to deployment

WinSol Solutions Pvt. Ltd. as Software Developer
Jul 2012 to Nov 2014

Description: -
The project Entitle "Mailing Portal" deals with identifying the clients to send and receive mail with the same login. This utility will allow multiple clients to login under the same login name and still have personalized mail information, enabling them to send and receive mails. Each user willing to avail the services offered by the mail server application should exist as a user before he can send or receive mails. This is made possible by prompting each user to enter his user-id and password before he can send or view his mails. This project has Inbox, compose and address list. E-mail is one of the most common and reliable methods of communication for both personal and business purposes.
Technologies and Tools involved: -
SQL Server 2000, VB.Net, C#, Front End Tool-ASP.Net
Proposed System: -
The general description gives an "executive overview" and is very client-oriented. It expounds on the functional and data requirements of the application. It also lists the limitations, assumptions and dependencies of the application. It also touches on the performance and quality requirements of the application and provides a solid definition of the interface.
