Last Active: 19-Jan-21   Last Modified: 19-Jan-21

Summary

I have 2.5 years of experience predominantly in Full-Stack web development, in all the phases of the software lifecycle including Analysis, Observer Design, Development, Testing and maintenance. Good exposure to web technology stacks. Experience with frameworks and libraries such as SLIM, Express, Bootstrap, Jquery, AdminLTE, JqueryUI, Sass, highcharts, google OAuth APIs. Experienced in MVC design pattern, development of RESTful APIs and version control system such as Git

Work Experience

Enparadigm Performance Solutions as Full Stack Developer
Jun 2018 to Till Date

PROJECTS
1. Project: Leadgen tool
Description: Mobile application for insurance advisors for referring and managing the leads and their rewards.
Responsibilities:
Design: Nodejs and Express with MVC.
Development: Design and Implementation of a complete backend APIs and referral engine.

2. Project: Behavioural Simulations (Ascend, Converse, Beacon)
Description: These applications help participants to assess and modify their behavioural aspects in the work environment. Learning areas including- Inspirational leadership, Communication and collaboration, giving and receiving feedback performance management etc.
Responsibilities:
Design: Used Slim framework with PHP.
Development:
End to end development of a behavioural simulation called 'Ascend', which gives insights about the tasks management in the work environment.
Implementation of bulk ' Excel' data import feature across all behavioural simulation.
Implementation of reports and graphs related to participant performance.
Integration with evolution for feedback and user management.

3. Project: Business Simulations (Learning Curve, Highrise, Turnkey, Salespro)
Description: Virtual digital business environment to help first time Middle Management,
Senior Management and HR managers to understand the business better. Through this
simulation, managers get to run a two-year business in 2-3 days.

Responsibilities:
Design: Adopting an MVC pattern using java, PHP.
Development:
Dynamic online case study implementation for most of the simulations.
Design and implementation of Centralized process for workshop
creation, user management and feedback system.
Customization of simulation engine for different business requirements.
Design and developing UI and APIs self-paced simulation called
'Bottomline', which helps the user to learn about the balance sheet.

4. Project: Evolution: Internal Tool used to manage the simulation workshops and
participants.
Responsibilities:
Design: Adopting an MVC pattern using java.
Development:
Integration of 'Spartpost' and 'Mailgun' API for emails.
Automate email sending process for simulation participants and
managers.
Facilitator date blocking system and Google Calendar API integration.
Review the code of teammates.
