Summary

I am an RPA developer currently working with ADP Pvt Ltd with very strong technical knowledge on UiPath, Blue prism, Good knowledge on Automation Anywhere tool. Able to understand the client's requirement and provide the suitable solution and design the flows, maintaining proper exception handling with all the best practices in place. Have good communication skills, interacted with clients. Have good understanding of the application interfaces and the design logics of the applications used for interactions by the Bots. Able to Develop, Deploy UiPath Robots to work in production environments, interacted many clients and deployed many Bots to work for different requirements, and used many applications, tools, scripting which was used by the Bots for the requirement Excel, word, Remote desktop, HTML, Outlook, CSS, C#, ServiceNow, HPOV, Chrome, IE. Worked on different environments like Citrix, Desktop, Web.

Work Experience

Automatic Data Processing as RPA Developer BLUEPRISM - ADP
Dec 2019 to Till Date

RPA Developer - End to End delivery, Pilot phase handling, testing, developing, UAT, Production movement.

Fujitsu Consulting India as RPA Developer
Nov 2016 to Dec 2019

Client/Project: Fujitsu Oceania
Role: RPA Developer
Description: Worked as an RPA developer, solution designer, Tester, performed UAT, and deployed to live. This process includes SACM reporting where the BOT should be able to get the reports from different locations and renames, deletes few lines form the file and performs the required modifications to the file names and then uploads to the required database URL, during this process it includes the proper exception handling, Work queues, schedulers, release management and many other functionalities of the tool was used.
Application/tools: IE, Excel, Excel VBA Macros, Citrix, Shared drive
Client/Project: Fujitsu Oceania
Role: RPA Developer
Description: Worked as an RPA developer where I have made automated the Tickets follow up and CSAT report to the Fujitsu Oceania - The bot will download the tickets generated from the Xtraction tool and sends an email for all the data in

the excel sheet, For CSAT report the bot gets the tickets from Xtraction tool and filter the excel based on REQ#### and then it performs the further process of getting the assignment group and assignee from the ServiceNow platform
Application/Tools: Blueprism, IE, Excel, Shared drive
Client/Project: Telefonica
Role: RPA Developer, Lead for the project
Description: We have developed an RPA BOT which will check for Server health check every day morning and evening, and updates the spreadsheet, analyses the spreadsheet with the given conditions to pass the checks or to fail. Once it is done it will upload the spread sheet to the SharePoint portal and send an email with the link to access it. Based on the required time Business summary report will be generated which reads and process the 17 emails from the outlook and clubs all the required date to a single email and sends it to the stakeholders, once this is done Bot will be reading and email which will have the Pin Entry Device issues list and then logins in to the each Till and verifies is there a problem with the Tills in the environment, and updates about the each till in the email and sends it across to the stakeholders, and Evening again the checks are performed to checks the servers health and again analyze the report and then uploads it to SharePoint portal and this goes on for every day, and if any other issues or anything unhandled will be emailed with the issues
Application/Tools: UiPath, Excel, Outlook, Word, UiPath, Internet Explorer, Remote desktop connection, HTML, CSS
Client/Project: Morrisons
Role: RPA Developer
Description: In this project I have developed and deployed the BOT, The Bot will need to login to the HPOV tool and then gets an excel document which has all the error or issues listed, it read them and based on the conditions and rules the bot will process each row. First thing Bot will create a ticket in the TSD (Triole for service or Triole service desk Fujitsu internal portal), Updates the ticket state like WIP, Completed and immediately it logs back to the RDP to rectify the issue or to find any issue, if it can be modified by the BOT then it proceeds further else if it is out of scope for the BOT then the ticket will be emailed to the team and updates the ticket as required by the client.
Application/Tools: UiPath, Triole Service Desk, HPOV, MS-Office (Excel), Remote desktop, Chrome
Client/Project: UBS
Role: RPA Developer
Description: In this Project the bot will need to access the outlook or any mail boxes IMAP/SMTP/Outlook or exchange mail server if credentials given and gets all the emails based on date designed for current day and gets the user information from each email and then creates the Service request as required in the email. Some of the decision checks and other verification is in place.
Application/Tools: UiPath, Oracle Application, Outlook
Client/Project: Mobile Insurance
Role: Developer
