Seeking a challenging position in software industry where my skills and knowledge can be best utilized in successful completion of the assignments.

Work Experience

Cognizant Technology Solutions as Software Developer
Jun 2015 to Till Date

Domain:
Account:
Role:
Banking and Financial Services.
US based bank.
Java developer in US based bank.
Responsibilities: * Primary responsibility is to develop, enhance (including moving the applications from on prem to cloud) and maintain java applications within the bank.
* We take prime responsibility of designing, rewriting, enhancing and maintaining the java applications.
* Understanding the total functionality of application and list out all the automations possible and work on the Automation part.
* Worked as offshore primary SME and to work closely with business partners in requirement gathering, analysis, coding, and implementation.
* Development of code fixes and enhancements for inclusion in future code releases and patches.
* Worked on with cloud project team to move the applications from on-prem to AWS cloud.
Project 1 description:
The project is to enhance and maintain the credit and lending application to deal with letters of credit.

Worked on to move the application from on-prem to AWS cloud.
Duration: November 2015 to April 2018
Operating System: Linux
Software/Languages: Java, IBM WebSphere Message Broker tool, AWS, DB2
Automations Done:
1. Created a desktop application using Java swing, which will help client operations team to access the application database and perform updates to maintain the account balance. This helped clients to get rid of third-party tool and its corresponding maintenance cost.
2. Created a web application for clients to upload messages for processing to an existing application and send email to the respective team with the status. This helped clients to eliminate the manual work of our support team.
Frameworks used for the Automation: Spring-boot MVC, JPA.
Project 2 description:
Duration: April 2018 to October 2018
The project is to enhance and maintain a cash position application.
Operating System: Linux
Software/Languages: Spring, hibernate, Db2, Tomcat
Project 3 description:
Duration: October 2018 to May 2020
The project is to enhance and maintain a trigger application. The application uses web service call to connect to other applications to collect the exception account details and sends trigger alert to clients via email.
Operating System: Linux
Software/Languages: REST web services using spring boot, Spring, hibernate, Db2, Tomcat
Project 4 description:
Duration: May 2020 till present
The project is to enhance, maintain the reconciliation vendor application and move the application to AWS cloud with vendor coordination. As part of support, worked with the SAP business object crystal reports tool and SQL to generate customer specific reports.
Operating System: windows
Software/Languages: AWS, MSSQL, WebSphere Server, Crystal Report tool
