- **TCS** as Product Manager , Business Analyst
Jan 2012 to May 2018

Administering and interpreting the solutions to clients based on their requirements and conducting proper documentation to support system processes
Developing business architecture through requirements such as scope, processes, alternatives and risks
Analysing client's business requirements and executing the same through document analysis, interviews, meetings, workshops and workflow examination.
Conducting 5+ levels of testing like functional, regression, user acceptance, integration and providing input into developing and modifying systems to meet client needs and also developing business specifications to support these modifications
Coordinating between business and technical personnel and ensuring a mutual understanding of processes and applications along with team members for system design, integration, application maintenance and so on
Following the best practices for project support and documentation as set by the peers; keeping track of the growth and progress of the project
Mapping requirements with best solutions involving evaluation and definition of scope of project.
Evaluating risks related to requirements implementation, testing processes, project communications and training thus leading to cost saving to the company
Managing client/stakeholders requirement, business needs, documentation, project coordination, team handling, implementation, testing, and delivery.
Awarded with TCS Star of the Month in Jun'16, On the Spot Award while at Bank of America project in Feb'17 for achieving organizational excellence and Service & Commitment Award in Jan'15 & 17
Translated stakeholder requirements into over 10 different tangible deliverables such as functional specifications, use cases, user stories, workflow/process diagrams, data flow/data model diagrams
Recommended changes to the IFMIS system for MP Government to incorporate digital signature in sanction orders, which reduced the turn-around-time for order approval, which inturn increased efficiency multi-folds, reduced cost for the organization, and improved ROI by up-to 25%. The changes and its positive effects on the project were later corroborated with data analysis.
Assisted the engineering development team with business use-case of the client requirements along with requirement gathering and its evaluation.
Delivered extremely useful strategic inputs including simplification of payment module through automation; these were later recognized and appreciated by the management
Managed an Agile team of 9 members to perform sprint activities and ensuring deliverables on time, within set budget and high quality; trained team members on the domain knowledge required to meet goals within the software development lifecycle and release schedules.
