QBurst Technologies as Software developer
Sep 2016 to Dec 2017

QTracker (QBurst Technologies)
Description: QTracker is the company's tracking application for tracking attendance, devices and other assets. It tracks the attendance of employees using swipe card login details, and company's application testing devices such as mobile, tablets and other assets making use of communication between beacons and mobile devices' Bluetooth Low Energy (BLE) systems. Multiple beacons placed at strategic positions in the office allows tracking and easier identification of the device using the emitted Bluetooth signals.
The goal of this project is to develop and maintain configurable and reusable server and website for mobile device tracking app for enterprises for a client in US.

The features of this application are
APIs for tracking device locations, usage patterns and user details.
APIs for tracking asset usage patterns and user details.
Dashboard for users and admin to see and manage device and asset details and history.
Dashboard for PMs to keep track of attendance of employees and their working hours.
Automated mailing server to send mails about device events to users and admins.

Implemented all the above features in configurable logic so that they can be easily deployed for different locations of same enterprise as well as for different enterprises. Interacting with the system engineering team for requirements gathering & scoping; designing the solution for the product; managing the process setup and monitoring development
Undertaking code development, debugging and troubleshooting the application.
